## Introduction - Yelp Dataset Challenge

#### **Dataset Overview**

#### **REVIEW OBJECT**

| Field       | Description                     |  |  |  |  |
|-------------|---------------------------------|--|--|--|--|
| review_id   | unique review id                |  |  |  |  |
| business_id | unique business id              |  |  |  |  |
| user_id     | unique user id                  |  |  |  |  |
| stars       | star-rating                     |  |  |  |  |
| date        | date                            |  |  |  |  |
| text        | the review itself               |  |  |  |  |
| useful      | number of useful votes received |  |  |  |  |
| funny       | number of funny votes received  |  |  |  |  |
| cool        | number of cool votes received   |  |  |  |  |

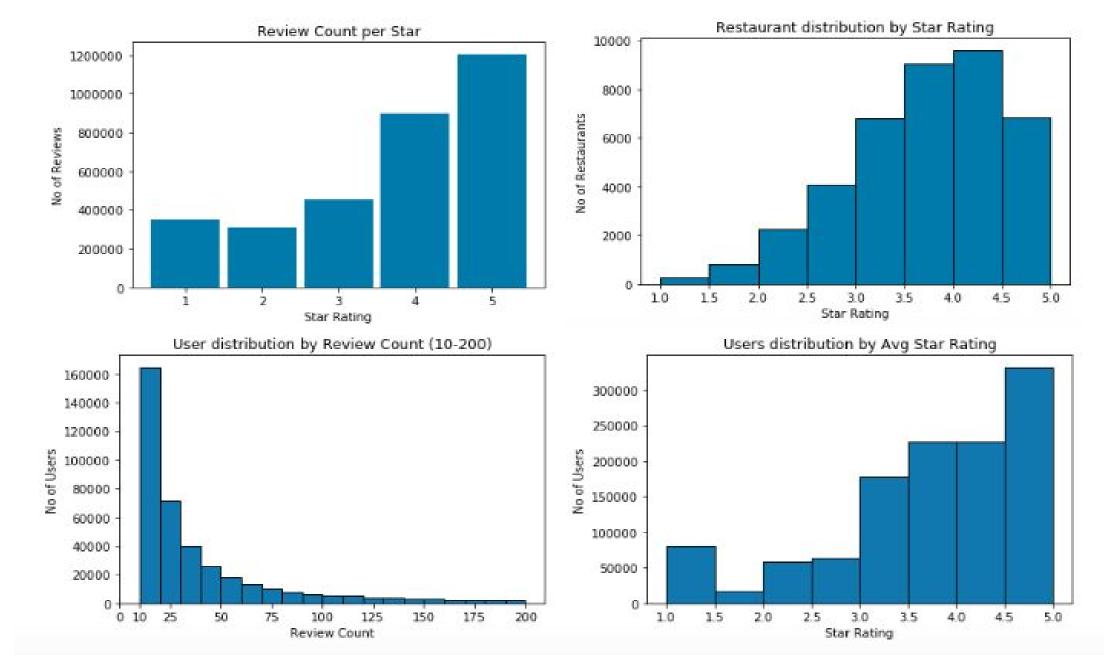

#### **RESTAURANT OBJECT**

| Field        | Description                        |  |  |  |  |
|--------------|------------------------------------|--|--|--|--|
| business_id  | unique business id                 |  |  |  |  |
| name         | business' name                     |  |  |  |  |
| neighborhood | neighborhood's name                |  |  |  |  |
| address      | full address                       |  |  |  |  |
| city         | city                               |  |  |  |  |
| state        | 2 character state code             |  |  |  |  |
| postal code  | postal code                        |  |  |  |  |
| latitude     | latitude                           |  |  |  |  |
| longitude    | longitude                          |  |  |  |  |
| stars        | star-rating                        |  |  |  |  |
| review_count | number of reviews                  |  |  |  |  |
| is_open      | 0 or 1 for closed or open          |  |  |  |  |
| attributes   | business attributes                |  |  |  |  |
| categories   | categories the business belongs to |  |  |  |  |
| hours        | working hours                      |  |  |  |  |

#### **Exploratory Data Analysis**

- We are interested only in restaurant data, so we performed filters on the whole dataset to get restaurant reviews only.
  - 65K Restaurants
  - 3.2M Reviews
  - 1.1M Users

#### **Distribution Plots:**

#### **Word Clouds:**

### Problems with the raw ratings

- User gave ratings based on certain latent criteria.
- Raw ratings can't reflect those criteria.
- BUT user also gave text reviews! Lots of information can be mined from those text reviews.
- Need a way to extract useful information from text.

#### Topic Modeling and LDA 1 ··· topic ··· K Topic proportions and Topics **Documents** assignments $\theta_{dk}$ doc 0.04 0.02 Seeking Life's Bare (Genetic) Necessities genetic 0.01 COLD SPRING HARBOR, NEW YORK- "are not all that far apart," describly in 1 ··· nth word ··· $N_d$ e." two genome researchers with radically ferent approaches presented complemen-July views of the binic genes needed for life life 0.02 evolve 0.01 sex to compare known as organism 0.01 $\operatorname{doc} z_{dn} = \{1, \cdots, K\}$ that today's organisms can be sustained with just 250 genes, and that the earliest life forms required a mere 128 genes. ### Latent criteria found by LDA

Categories are assigned manually based on top ranked significant words in each topic.

| Category | Topics   |  |  |  |  |  |
|----------|--|--|--|--|--|--|
| ambience | 0,1,2,6,16,20,21,24,25,28,33,37,38,48  |  |  |  |  |  |
| service  | 1,16,20,21,24,25,27,28,33,34,35,37,28,<br>40,45,47,48                          |  |  |  |  |  |
| price    | 1,15,24,36,45,48   |  |  |  |  |  |
| delivery | 22   |  |  |  |  |  |
| taste    | 14,29,35,40,46,49  |  |  |  |  |  |
| food     | 3,4,5,7,8,9,10,11,12,17,18,19,23,26,29,<br>30,31,32,34,39,40,41,42,43,44,47,49 |  |  |  |  |  |

| Food type       | Topics     |
|-----------------|------------|
| american food   | 4,11,17,43 |
| greek food      | 8          |
| asian food      | 44         |
| thai food       | 26,        |
| korean food     | 19,        |
| indian food     | 29,        |
| vietnamese food | 23         |
| mexican food    | 30,        |
| salad           | 31,39      |
| breakfast       | 10,        |
| vegeteranian    | 42         |
| dessert         | 7,39,49    |
| spanish food    | 5          |
| italian food    | 41,        |
| sea food        | 12,18,39   |
| café            | 9          |
| bar             | 34,40      |
| german food     | 32         |

### Calculating Latent ratings from LDA

- Only first two top ranked topic in each review is significant.
- Average over all relevant reviews and get the rating per latent feature.

$$LR_{b_k}(C_i) = \frac{1}{|R(b_k)|} \sum_{r \in R(b_k) \land t_j \in C_i} Sig(r, t_j) Rating(r)$$

where,  $C_i$  is the category interested;  $R(b_k)$  is the set of reviews for restaurant  $b_k$ ;  $Sig(r, t_j) = 1$  iff topic  $t_j$  is significant for review r, otherwise  $Sig(r, t_j) = 0$ .

#### Restaurant-Latent Feature matrix

| business_id            | name                | overall_stars | city       | ambience    | service     | price       | delivery | taste       | food        |

#### Recommendation System

- Ask the user to rank the criteria (features) on a scale of 1-10 for each feature.
- Rank the Restaurant-Latent Feature matrix according to the given criteria.
- Returned the top ranked restaurant back to the user.

### Conclusion
